@ symbol uses in CSS

@import url(_____);
Used to add an external stylesheet to your current stylesheet

@font-face{…..}
Used to create a new font family for you css document
Required properties are font-family (the name of the font) and src (the location of your font)

@keyframes
Used for animation (more information when we cover animation)

@charset ____;
Used to denote what the character encoding is for your current document

@media
Defines media queries that apple different styles based on the different media types/features
Main use is to apply responsive layout (changing certain properties so that the same page looks good on computers, laptop, mobiles, tablets…)

```
@media
     not|only
     media type
     and
     (media feature)
      and|or|not
     (media feature) {
   ......
}
```

If `not|only` is included then a media type is required
Possible `media types`: all, screen, speech, print, …
If `media type` and `media feature` are both present `and` is required
`media feature` includes: height, max-height, min-height, width, max-width, min-width, orientation.… There are also many other options

`and|or|not` is in place to signify how multiple media features act together.
