Lists
Allows you to set specific properties regarding ol, ul and li elements
Definition lists have not specific css properties, but note that <dd> does have a default
padding-left added by the browsers default stylesheet.

list-style-type: _____;
Allows you to change the type of bullet (list marker) that is used
Possible values for <ul>: disc, circle, none, square
Possible values for <ol>: lower-alpha, lower-roman, none, upper-alpha, upper-roman
        as well as a number of other options in css: armenian, cjk-ideographic, decimal,
decimal-leading-zero, georgian, hebrew, hiragana, hiragana-iroha, katakana, katakana-iroha,
lower-greek, lower-latin, upper-greek, upper-latin

list-style-image : _____;
Allows you to set an image as a buller (list marker). The image will take the full height to display.
It's width is determined by the position. When using list-style-position as inside the image will
be completly visible, if outside then it will be cropped if too wide.
Possible values: url(____) or none

list-style-position: _____;
Specifies if the bullet will be inline with the rest of the content or outside of the content flow
Possible values: outside, inside
